

MICROGUARD®

Concrete, Brick Pavers & Masonry Extreme Performance Treatments

MicroGuard® AD703 Concrete Clear Gloss Treatment is an ideal 'Wet Look Sealer' for use as an impregnator on decorative brick pavers or exterior concrete surfaces, such as sidewalks, driveways, patios, pool decks; anywhere mitigating mold growth or minimizing organic staining is important. When used as an impregnating sealer, a beautiful and subtle satin sheen is achieved and colors within the substrate are dramatically enhanced.

MicroGuard® AD702 Concrete Clear Waterproofing Sealer is a perfect choice for sealing interior concrete slabs to reduce water vapor transmission before other types of flooring systems are installed; carpeting, tile or wood laminates.

MicroGuard® AD702 Sealer & AD703 Gloss Treatment, as a finishing coat, may also be used in conjunction with each other for coating interior concrete floors, such as factory or warehouse installations, auto repair bays, aircraft hangars or anywhere abrasion, solvent, chemical & stain resistance is imperative.

Primary Benefits Include:

- Outstanding abrasion resistance (ASTM D-4060)
- Will not support mold growth (ASTM G21)
- Improved foot traction (ASTM D-2047)
- Minimizes 'dusting' & 'spalling' of surface
- Extreme solvent & chemical resistance
- Positive vapor barrier control
- Excellent stain resistance properties
- Easier to clean & maintain surfaces

Preserve, Prolong & Protect Masonry with MicroGuard® Extreme Performance Treatments!
